

FINDING PFAS

Manufacturers must ask the right questions to be prepared for PFAS regulations

1 Production?

Are PFAS entering your products through packaging, equipment, lubricants, or cleaners?

2 Facilities?

What PFAS are in your raw materials, facilities, waste, and local environment?

3 Exposure?

What is the potential risk to your employees, customers, the community and environment?

4 Background?

What PFAS levels existed in your local ecosystem before your activities?

5 Alternatives?

Are there substitution options available to you? Are there mitigation steps in place?

6 Regulations?

Are you compliant with current rules and prepared for anticipated regulations?

7 Best Practices?

Are you properly handling, storing, and disposing of PFAS materials properly?
